

## Santa Ynez River Water Conservation District ID No. 1

P.O. Box 157 • 3622 Sagunto Street, Santa Ynez, CA 93460

# New Season Same Drought

Fall has ended and winter has arrived. The hot summer months may be over, but the drought conditions and water supply shortages are not. Customer cooperation and water conservation throughout the summer helped **to preserve water supplies for the future**. Even with the recent rainfall, Santa Ynez, and nearly every part of the State, is dealing with an unprecedented drought and tough new water quality restrictions that have significantly reduced available water supplies.

Under these circumstances, ID No.1 customers have shown a commitment to conservation, responding to the District's Stage 1 Water Supply Shortage declared in June to cut back and substantially reduce water use by 20%.

**ID No.1 customers reduced water use by more than 20% since July 2014 compared to 2013.**

Thank you for your great effort! Water use restrictions are still in effect. Please continue to conserve by adhering to water-saving measures.

# Conservation Counts.

To ensure that water-saving practices are continued, ID. No. 1 is working hard to provide our customers with useful tips and tools to help you save water inside and outside your homes and businesses.

## We encourage you to:

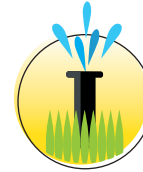

Change your  
sprinkler schedule as  
the weather cools

Run the dishwasher  
and washing machine  
with full loads only

Stop washing  
down driveways  
and sidewalks

Repair and  
replace damaged  
sprinklers

Take shorter  
showers

Find and  
fix leaky faucets  
and toilets

Limit outdoor  
irrigation to  
twice a week
